This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed      dist
##  Min.   : 4.0    Min.   :  2.00
##  1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##  Mean   :15.4    Mean   : 42.98
##  3rd Qu.:19.0    3rd Qu.: 56.00
##  Max.   :25.0    Max.   :120.00
```

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot (Areal, Balcombe, and Rapsomanikis 2013).

Blah blah (see Areal, Balcombe, and Rapsomanikis 2013, 33–35; also Ashenfelter and Graddy 2003, ch. 1).

Blah blah (Ashenfelter and Graddy 2003, 33–35, 38–39 and *passim*).

Blah blah (Ashenfelter and Graddy 2003; Areal, Balcombe, and Rapsomanikis 2013). A minus sign (-) before the @ will suppress mention of the author in the citation.¹ This can be useful when the author is already mentioned in the text:

Smith says blah (2013). You can also write an in-text citation, as follows:

Areal, Balcombe, and Rapsomanikis (2013) says blah.

Areal, Balcombe, and Rapsomanikis (2013, 33) says blah.
